

How Does a Project Emerge? “The Rocket Ship Exploration”

New costumes inspire the children to become more interested in space travel and rockets.

The class makes a list of items we might need, does some research on space and rocket ships, and then creates a space environment for our rocket that includes stars and planets.

Construction of the rocket includes computers for controlling the ship, space food made of play dough, a flag, and a rope tether to keep the astronauts from floating away.

The class spends two weeks researching and working on the details of the ship, including placement of the fire to propel the rocket forward and a control panel for the captain to use.
